

Thank you for checking out HANDI SOS

Handi SOS is a personal safeguarding product; an app and little battery powered button that is paired to your phone via Bluetooth low energy. When pressed, it instructs your phone to send a text message to your chosen SOS contacts with your google maps location, letting them know you need **help**. It's a brand new, innovative and novel product that we are super excited about!

WHY was Handi SOS created?

Have you ever tried letting someone know you need assistance in a moment of panic or distress or when your phone is out of reach?

Handi SOS was created as a personal safety gadget that enables you to quickly and discreetly send an SOS message with your location by the simple press of a button; even if your phone is out of reach.

WHAT is Handi SOS?

Handi SOS is a small coin sized portable, battery powered bluetooth button and app that pairs with your smart phone allowing you to notify selected contacts you need help – even if your phone is 30 metres away.

WHAT does it do?

When pressed, the Handi SOS button sends a text message and your Google Maps location to the people you wish to inform that you are in need of help.

HOW does it work?

Powered by Bluetooth Low Energy (BLE), the small coin sized button is paired with your phone. When pressed, the button sends a signal to your phone and the Handi SOS app instructs your phone to send a text message with your location to the contacts you have selected; including an emergency service (such as the Police) if you wish. These contacts will receive the SMS text message with your location based on the GPS location of your phone.
